AS YOU MICROFILM

ENDORSER MODEL 207

This optional feature of the Model 205 recorder provides fast, accurate endorsing or cancelling of checks and other media. Model 207 endorser eliminates the need for a separate endorsing operation. Documents are endorsed or cancelled with no loss of micro-filming speed.

Model 207 is a precision instrument. Every endorsement is uniform and legible with bold, sharp and even inking. There are no ink smudges or skips. Endorsement is always applied within $\frac{1}{4}$ inch of the leading edge of the item regardless of the size of document.

DUAL ENDORSING DIES

Removable Printing Head

Push-button Controls

Inking Lever

Three way controls assure flexibility. Microfilm and endorse in one operation or separately.

Extra printing heads are available and are easily interchanged for added endorsing requirements.

Print cylinder, using the dual-die system with two complete endorser dies and dating stamps, has half the wear and double the life of ordinary endorsing dies. Even at high speeds positive operation is assured as the cylinder rotates only one-half cycle with each endorsement.

Finger-tip, push-button controls permit rapid and easy changing of date and batch number without handling of endorsing die.

Protective safeguard eliminates chance of accidentally changing push-button controls.

Accepts documents of any thickness without necessity of making special adjustments.

A touch of the inking level automatically applies ink to roller.
